

ANTISTATIC COMPOSITION

Abstract of the Disclosure

Polymer compositions comprising

- a) a polymer substrate selected from the group consisting of the polyolefins, polyesters, polyamides and polylactic acids and
 - b) a combination of
 - i) at least one permanent antistatic additive selected from the group consisting of the polyetheresteramides and
 - ii) at least one migratory antistatic additive selected from the group consisting of the alkylsulfonic acid salts, the alkyl diethanolamines and the alkyl diethanolamides,
- are effectively antistatic.
